Dongles with blue or green red cases of silver with four screws per panel (eight in total), or those that are announced as "pro" are not ours. These dongles use worse quality components, are designed at low cost and may not have all the characteristics of the V3. We cannot support falsifications and these do not help support the operation of the blog and new products design. The best place to buy Dongles RTL-SDR V3 is directly from our store at www.rtl-sdr.com/store. ***** GUE OF EQUIPMENT Currently, the RTL-backpack SDR Más Comén is the R820T/R820T/R860 that is sold for around \$ 30 USD. See the page Buy Dongles RTL-SDR to get more information about purchases. Generally, at least one double number processor will be needed to execute the majority of SDR software without problems. Some ADS-B command and decoder lane software can work in less powerful hardware. To enjoy RTL-SDR at least, you will need a decent antenna. Our packages that come with the Dipolo antenna assembly are a great beginning. Be sure to put them up and outside (only during the good weather) to get the best results. The units that we do not sell can come with a fixed long length antenna that is very well to try, but in general it is not so large. The most recommended exterior antenna for the general scan is a trustee due to its broadband reception properties. You can also build cheap an an antenna broadband planar (PDF warning) of some metallic pizza pans. SDR# (SDRSHARP) Settings guide (tested on Windows 10/8/7 32/64 bit) (XP/incompatible view) SDR# is the SDR Má iprogram used in Windows. We recommend it as one of the most important to configure and use with the RTL-SDR, a RTL-SDR, dongle. The cheapest and best for most applications is the R820T/R820T2 dongle. You can find information ³ how ³ buy one here. You must have Microsoft .NET 5.0 redistributable 32-bit installed to use SDRSharp. Follow the link and and The redistributable. It is possible that the majority of the AÄn equipment do not have .NET 5.0 installed. Note that .NET 5.0 is not compatible with Windows XP. If you are executing XP, display down in this página and look for the installation guides of the HSDSR or SDR console. Update: a recent change of Microsoft can mean that it also needs .NET 5.0 SDK. If you continue to receive errors that .Net does not settle after installing it, try to install the SDK. Visit www.airspy.com and finds the discharge boton in the upper men's. Next to the heading "Defined Software Radio Package", click on the download boton to download SDRSHARP-X86.zip. Remove (decompress) sdrsharp-x86.zip in a folder of your PC. (Important! (In addition, do not remove in a folder within the Board of Program Archives, or the installation may fail, since these folders are usually made automatically of only reading by Windows). Double click on Install-RTLSDR.Bat from the extreme folder. This will initiate a system symbol that will download all the necessary controllers for Sdrsharp to function with RTL-SDR. The system symbol will be closed automatically after a few seconds. If the BAT file was correctly executed, the RTLSDR.dll and Zadig.exe files will be downloaded in the SDR Board_#. If they were not downloaded, their PC or antivirus solution may be poorly configured and can have problems running batch files (check that the folder is not reading it and that program files is not in the Board of Directors. If installation If Zadig is less than 5000kb (5MB), the download has failed and you must download Zadig manually. Plug your dongle. Do not install any of Programs included (if any) and be sure to wait a few seconds for plug and play to try to install the key (it will fail or install the Windows DVB-T TV) Windows) Windows) If If you've already installed the DVB-T drivers that came on the CD bundled with some dongles, uninstall them first. In the folder where you extracted the sdrsharp files find the file called zadig.exe. Right click this file and select "Run as administrator". In Zadig, go to "Options->List All Devices" and make sure this option is checked. If you are using Windows 10, in some cases you may need to also uncheck "Ignore Hubs or Composite Parents". Select "Bulk-In, Interface (Interface 0)" from the drop down list. Make sure it is Interface 0 (ZERO), and not "1". Note on some PCs you may see something like RTL2832UHIDIR or RTL2832U instead of the bulk in interface. This is also a valid selection. Double check that USB ID shows "0BDA 2838 00" as this indicates that the dongle is selected. WARNING: DO NOT select anything else or you will overwrite the device's driver! DO NOT click around randomly in Zadig. If you do you are likely to overwrite your mouse, keyboard, printer, soundcard etc drivers. Many bad reviews we get are due to people clicking around randomly in Zadig, so PLEASE check what you are doing that will be installed after clicking Replace/Install Driver. Click Replace Driver. On some PC's you might get a warning that the publisher cannot be verified, but just accept it by clicking on "Install this driver software anyway". This will install the drivers necessary to run the dongle as a software defined radio. Open SDRSharp.exe and set the "Source" drop down box to 'RTL-SDR USB'. This "Source" tab is on the lower left menu bar by default. On newer version of SDR# you may need to scroll down in the drop down A list to find the USB RTL-SDR entrance. Press the reproduce boton (the right -hand triple in the upper left of the program). The RTL-SDR software radio must now be configured and ready to use! If everything has worked, it should be able to begin to tune the frequencies. Important! Do not forget to also adjust the RF gain configuration by pressing the configuration boton (it looks like a gear/gear) at the top next to the reproduce boton. By default, RF's gain is set at zero. A gain of zero will probably receive more than FM of very strong transmission: increase the gain until it begins to see other seities. To receive HF seals below 24 MHz with a V3 RTL-SDR blog, see our V3 users' guide. Next steps after configuring your RTL-SDR configured with SDR# we recommend investigating the following: If you are using a V3 RTL-SD.com dongle, see our Guide of V3 users to learn how to use special characteristics as HF Direct Sample and the bias shirt. Read our SDR# users' guide to learn each configuration in SDR#. See all our outstanding articles in this blog for several projects and tutorials related to RTL-SDR. Stock antenna update. For a separate reception, you must use an antenna mounted on the outdoor ceiling. The ungeimal antenna will depend on the frequency and the project that interests you, but for a general antenna of all proper, we recommend a flat disc antenna (PDF). If you are using your RTL-SDR for HF with the direct sampling mode or a Upverter concenter, we recommend using SDR# with special nineteenth-century controllers. This will allow you to bring the small bands of bandwidths used in HF without losing the resolution. See our store to obtain gain several RF accessories such as filters, LNA and antennas. If you suspect a failure like this, contact your dongle manufacturer and request a refund or replacement. Note: This higher than normal current draw problem does not exist in RTL-SDR. V3 Blog batches from 2019 onwards. I receive the error "1 Supported devices have found but all occupied "or" Libusb open error -12 "first check that another program is not using the RTL -SDR. Also some USB 3.0 ports are with failures, change to a USB 2.0 port. Some users have also had an hour with the installation of everything from the safe way of Windows. Care that you are not selecting the "USB receptor (interface 0)" in Zadig, and instead you may select the Bulk-In interface, or one that can say rlt2832buhidar or something more preferred with rtl. If you do not see the Bulk in interface, ensure that "options-> List all devices" is marked and that "ignore compound centers or parents." Some people report seeing more than just the volume on the interface. It can also appear as the mark of your dongle or something prefix with "RTL", e.g. Rtl2832u or rtl2832uhidr. Any of those options should also work. In rare cases, you may receive a defective dongle that does not appear on Zadig, no matter which USB port or computer you try. You must ask for a replacement in this case. USB 3.0 ports do not work unfortunately some cheap USB 3.0 drivers are wrong ³ and do not work with some USB 2.0 devices. In general, USB 3.0 works well with the RTL-SDR., but there are some drivers that simply do not recognize the dongle. In this case, use a USB 2.0 port instead. When running install-rtlsdr.bat, I get command line errors such as "the system cannot find the specified file" and the SDRSHARP folder is not downloaded, this is because it does not decompose the files and tries to run install -rtlsdr.bat from the zip file. Remember to extract the files first, before running them. When I run install-RTLSDR.Bat, a CMD/DOS window flashes briefly and then disappears. Nothing is installed. There appears to be an error or ³ error ³ some versions of Windows where you cannot run batch files. One way to avoid this is to install RTL-SDR drivers manually. We have instructions for this here: rtl-sdr.com/manual-installation-of-sdr. Some anti-virus solutions are also too restrictive and do not allow .bat files to run. In this case, disable or install better antivirus software, or perform a manual driver ³. The reception ³ in SDR.# seems very poor/receiver is insensitive, make sure you have increased the RF gain slider that can be accessed by clicking the "n Configure button. In addition, in the areas of deficiencies that use the stock antenna indoors may not be enough. First test with the antenna positioned high outside. In some cases with the stock antenna the connection ³ and the can disconnect at the base of the antenna causing an unexpectedly poor reception" In rare cases if you still can't get any strong and other radio can, then you may have received a broken dongle and should ask for a replacement. SDR.# gives error "The application ³ failed to initialize properly (0xc0000135). Click OK to finish." This may mean that you do not have the correct .NET Framework installed. SDR.# generates an error "Object reference not configured on an instance of an object" This may mean that you do not have a properly installed audio driver on your PC or that you do not have an output audio device enabled. ActUse them in Windows sound playback ³. The dongle constantly disconnects from the USB port first test to make sure it is not the fault of an extensionÄ ³ a bad USB cable by plugging the dongle directly into the PC. Try other USB cables if possible. If the USB connector is loose, gently press the top of the USB connector on the RTL-SDR, and make a small blood³ can help tighten the connection. If it is still often disconnected, the dongle may be defective and you must ask for a replacement. SDR.# crashes when my screen stays in sleep mode³ n I appears to be an error With SDR.# or Windows. The solution³ n now is simply to turn off the top mode of the screen. The key does not turn on and the LED does not light on LED models. The key is faulty and must be refunded or replaced. It seems that my PC is not powerful enough to run SDR.#, as it uses almost 100% CPU. For the graphical SDR, GUI software like SDR.#, at least one dual-core processor is recommended. If you have a CPU that is decent to the limit and still experience high CPU utilization, try reducing the sampling rate to 1 MSPS or less, reducing the resolution ³ the FFT screen (or turning it off), turning off the coefficient ne ne odacovicque ovittispsid le ranoiceles ed sÄÄupsed gidaZ ne nÄÄicalatsni ed nÄÄtob le ne cilc ohceh ÄRabsh deat eugrop se otSE arenam angula ed BSU ovittispsid rop /nÄÄtar / odalcet iM .Ääimpor oreP gidaZ ©ÄsU .odalrtif ed nedro le ricuder y otercroc drop-down menu. Please do not randomly click on things in Zadig and be sure to read step 9 very carefully. Be sure to select the correct RTL-SDR, device (Bulk-In Interface 0) first. Zadig will be able to do so in Windows Device Manager, right-click ³ device -> Properties -> Driver Tab -> Update Driver -> Find Driver Software on My Computer -> Let me choose from a list of available drivers on my computer -> Choose the old driver, and then ³ next and follow the instructions. My R820T2 RTL-SDR, appears as an R820T when I run the ³ diagnostic tool rtl test The R820T2 and R820T are electrically identical except for a few minor changes in the maximum IF filter widths that occurred by accident when using higher quality silicon in the R820T2. Accidentally different filters and higher quality silicon can be the reason ³ the R820T 2 has generally better performance and lower manufacturing variability³ Thus, an R820T2 will appear as an R820T on the PC, as there is no distinction³ between them on the digital part of the circuit. You can confirm that you have an R820T2 by checking the marks on the chip. My antivirus shows SDR.# as a virus. This is almost 100% a false positive. SDR.# is updated frequently and therefore a new .zip file is sometimes published almost daily. Poorly designed antivirus programs sometimes assume that any file that is not downloaded is often a virus. With SDR.# being updated so often it takes a while for many people to download the new version³ and build trust with the antivirus purchase. The mode selection buttons ³ in SDR.# glow gracefully and I can't click them. Some users have discovered that this error is due to the atur atur al a oseca nÄÄCaragufñioc ovihcra nu ragrac la rorre nu ocudorpi ah esÜ omoc rorre nu ecudorpi es #RDS ratrec IÄ .rorre le rigtroc arap swodniW ed allatnap ed nÄÄcaragufñioc al ne odanimretederp rolav la oevun ed nÄÄicpo atse accelbatser. swodniW ne "sadalzlanorep oÄÄamat ed sonotcipo" u "odiazlanorep alacse ed levin" nu ed Files \Sdr. \S14112qq.tmp denied. (C:\ Program Files \Sdr. \Sdrsharp.exe.config) ä ä ä ä " -> system.unauthorisedaccessexception: access to the route 'C:\ Program Files \Sdr. \S14112QQ.TMP' has been denied.. "This is usuallyly due to the fact that the SDR# files have copied in a reading folder. In Windows folders located in 'C:\ Program Files "they are usually only automatic reading. To solve it, install SDR# in a reading folder that is not in program files, for example 'c:\ sdr.". My dongle comes with a remote control. Use to change the television channels. It is only Ä igeti when the key is used for its original proper proper With my dongle, how do I do it? The original backpack was for the DVB-T television, and can still do this. Ro Note that DVB-T and SDR controllers are different and both cannot be installed at the same time. You can download DVB-T controllers here. We recommend using PROG-DVB as TV software. I have a V3 RTL-SDR and I can't make the HF seals operate you must activate the direct sampling mode for HF reception. See the user's guide of V3 to obtain information on how to activate the direct sampling mode. The error "RTLSDR demod writg reg Failed with -9" on Command Line Based Software Like Rtl FM, RTL TEST, The Bias Tee Software etc. This generally means that there is some problem with the USB port on its PC does not work correctly. Try other USB ports on your PC and confirm that the key works on another PC. I have a modern Ryzen-based motherboard with USB 3.0/3.1 and no software can detect and execute my RTL-SDR. There seems to be a libusb error/incompatibility with modern mothernoid plates like this. We have ovihcra ovihcra le rop #RDS ateprac al ed lld.rdsltr ovihcra le ecalpmeeR .Auqa otse arap nÄÄiculus anu renet ÄÄrebed euy "golb-rds-ltr" serodaltornoc sortseun ed nÄÄisrev anu From the ZIP file and cousing the name to RTLSDR.dll. Another person has also published a fixed DLL file that works for some people. If you continue to have problems, do not hesitate to publish in the solution of the problem solution of our forums. The official SDRSharp plugins list can be found here. A good guide to learn to use SDRSharp and what all options can be found here. HSDSR configuration guide (tested on Win XP and subsequent versions) acquire a Dongle RTL-SDR. The cheap and better for most applications is the Dongle R820T/R820T2. You can find information about how to buy one here. Plug your key and do not install any of the programs that comes with, but be sure to leave plug and play finish trying to install it. If you have already installed the software controllers that came previously, uninstall them first. Go to and download Zadig. In Zadig, go to options-> Show all devices and ensure that this option is marked. Select "Bulk-In, Interface (Interface 0)" From the drop-down list. Keep in mind that on some PC you can see something like RTL2832buhidar or RTL2832U instead of most in the interface. This is also a vian selection. Check that the USB ID shows "0bda 2838 00", since this indicates that the key is selected. WARNING: Do not select anything more or will overwritten the controller of that device! Do not click Azar in Zadig. If you do, it is likely to overwrite its ratio, keyboard, printer, sound card, etc. controllers. Click Install controller. It is possible that you receive a warning that the editor cannot be checked, but it must be accepted by clicking on this controller software anyway. This will install the necessary controllers edsed rdSDH ragracedS .satnuj sevall siÄm o sod razilizu aeed o BSU otreup orto a evall al evum is oevun ed exe.gidaz ratuceje etisecen euy elibsoP se euy atneuc ne agneT .erawftos rop adinifed oidar anu omoc elgnod le ratuceje le ne cilc odneicah otse agaH .zH 000291 a oidua ed ortseum ed asat al railbmac ÄÄrebed .äcipÄÄt ahcna adnab ed nÄÄismsnart ed MF nÄÄäicatse anu rahucuse arap .WB-MF etnazised lortnoc le noc etnemalaunm racifidom edeup es MF adnab ed ohcna le .MF odoM nÄÄtob le ne cilc reoah ed sÄÄupsed .odom ed senotob sol ne cilc odneicah raretla edeup es odom IE .mooz arbalap al ed adreuiqz al a iÄtse euy mooz ed etnazised lortnoc le odnazituz ortcepse led rilas y isracreca edeup .etsuqj ed soremÄAn sol odnazituz o FR ed ortcepse le ne cilc odneicah aees ay .adgesed äcneuceref al ecinotnis ogeul .äseretni el euy äcneuceref al ad crece äcneuceref anu a laeol rodalatsni led äcneuceref al eibmac .nÄÄäicatse anu razinotnis arap .oitxE nÄÄtob le ne cilc agah .äcneuceref ed nÄÄäicercery y äcnanag .RDS-LTR atneup ed dadicolev al recolbatse arap .RDS le ÄÄraznemoc otSE .ZF enoiserp etnemavitanretla o ocinif enoiserp .MF nÄÄismsnart al omoc .ahcna adnab ed MF seleÄÄes arap 000291 aed u .MFN ed selanegp solaeÄÄes arap zH 00084 ed adlias ed ortseum ed asat ajñIE .6F enoiserp etnemavitanretla o adnab ed ohcna ed nÄÄtob le ne cilc agaH .odaesed oidua ed ÄÄrebut ed erawftos nu o secovatla sus ne rarugifñioc ebéd euy /zovatta la(XR ed XR" ed nÄÄCaragufñioc al se Auqa etnarotpmi nÄÄCaragufñioc acinÄÄÄ .5F odnanoiiserp etnemavitanretla o .adreuiqz roireinfi anuqse al ne odinos ed atejrat al ed nÄÄtob le ne cilc odneicah adlias ed odinos ed atejrat us ajñIE .osap omittÄÄ le ne lld.U2382LTR OltxE ovihcra le odaipo ayah euy erpmeis allatnap atse ev on is neib iÄtsE .rirbÄ ne cilc agah ogeul y raipoc ed abaca euy le erbos lld.u2382ltr oitxE ovihcra le ajñIE lld. ovihcra nu enoicceles euy eticilos el es euy elibsoP sE .RDSDH otreibÄ .RDSDH \)68x (amargorp ed sovihcRÄ \.C ne adanimretederp amrof ed eelcbatse es euy RDSDH nÄÄicalatsni ed ateprac al ne lld.u2382ltr oitxE ovihcra le eipoc .RDSDH ralatsni arap ragraced ed abaca euy rodalatsni le esÜ .anigiÄp al ed roireinfi etrap al ne ragraced nÄÄtob le odnasU Bandwidth or alternatively pressing F6 and then selecting the output sampling speed as 192000 Hz. Cubicsdr configuration guide (tested in XP and above) Buy a Dongle RTL-SDR. The cheap and the best for most applications is the Dongle R820T/R820T2. Information about envelope one can be found here. Plug in your dongle and do not install any of the software that it came with, but ensure you let plug and play finish trying to install it. If you've already installed the software drivers it came with previously, uninstall them first. Go to and download Zadig. In Zadig, go to Options->List All Devices and make sure this option is checked. Select "Bulk-In, Interface (Interface 0)" from the drop down list. Note on some PCs you may see something like RTL2832UHIDIR or RTL2832U instead of the bulk in interface. This is also a valid selection. Double check that USB ID shows "0BDA 2838 00" as this indicates that the dongle is selected. WARNING: Do not select anything else or you will overwrite that device's driver! DO NOT click around randomly on Zadig. If you do you are likely to overwrite your mouse, keyboard, printer, soundcard etc drivers. Click Install Driver. You might get a warning that the publisher cannot be verified, but just accept it by clicking on Install this driver software anyway. This will install the drivers necessary to run the dongle as a software defined radio. Note that you may need to run zadig.exe again if you move the dongle to another USB port, or want to use two or more dongles together. Go to cubicsdr.com and go to the downloads page. Find the download link for the latest version. Download the version suitable for your particular version of Windows. Run the CubicSDR installer. Plug in your dongle and run CubicSDR from your start menu. You will be greeted with a SDR Devices menu. Choose your RTL-SDR from the menu and click on the "Use Selected" button. CubicSDR will automatically start. Click anywhere on the waterfall to start listening. Other SDR Windows Software Compatible with RTL-SDR See the Software Guide for a big list of other compatible RTL-SDR software. Getting Started on Linux For Linux we first recommend having a look at Ranoüs' Linux Quickstart guide document which can be found here Morf ro noitritsid xunil ruooy ni reganam Egakcap eht AIV DEDAÖV DEDAÖV DEB DEB nac ni RDS-LT.EBORPDOM/CTE/ TSIL tsil kcalb eht etdap ot deen deen tsil-tpa" yb rds-ltr delatsni fi .. If you want to install GNU Radio we recommend using Marcus Leech's script by typing the following into terminal. This installs the RTL-SDR drivers as well. wget && chmod a+x ./build-gnuradio && ./build-gnuradio Note that if you want to run Linux in a virtual machine it has been reported that RTL-SDR performance with VirtualBox is rather poor due to it's slow USB connection. VMware Player on the other hand has good performance - just remember to set the USB controller to use the USB 2.0 protocol as by default it is set to USB 1.1. Another good Linux quick start guide written by Kenn Ranoüs can be found here (pdf). Getting Started on OSX As there is a severe lack of SDR software for OSX, we recommend using either Linux or Windows. However, GORX is a SDR program that works well on OSX. We can now also recommend the multi-platform CubicSDR which can be downloaded from cubicsdr.com.
